

WHAT IS CLAIMED IS:

1. A baby carriage comprising:
a baby carriage body provided with a pair of armrests; and
a child car seat capable of being detachably installed on the baby carriage body;
wherein each armrest is provided with a projection, and
the child car seat including a child car seat body, and locking devices capable of engaging with the projections, each of the locking devices including a locking member which turns relative to the child car seat body and engages with the projection to lock the child car seat body in place, each of the locking devices being engaged with an upper surface and an outer side surface of said armrests.
2. The baby carriage according to claim 1, wherein the locking member is biased in a locking direction.
3. The baby carriage according to claim 1, wherein a handle is rotatably connected to the child car seat body through handle holders, and the locking devices are held in the handle holders, respectively.
4. The baby carriage according to claim 1, wherein a handle is rotatably connected to the child car seat body through handle holders.
